

EBSCON 2022: Time to register

Europe's chip and electronics industry is striving for "sovereignty", as EBSCON 2022 in Graz on 5 October shows.

(Villach, 21 September 2022) In addition to "Sovereignty", the topics "Start-ups", "Sustainability" and "Security" will also be presented. EBSCON 2022, organised by the Silicon Alps Cluster (SAC), has the motto "Building Bridges for Tomorrow". One of the most important and sustainable "bridges to the future" is the independence or "sovereignty" of the European electronics and semiconductor industry.

Cluster Managing Director Robert Gfrerer: "Already at the beginning of the year, the EU passed the 'European Chips Act' and thus also launched the largest investment programme of the industry. It's all about making the value chains in Europe more robust, whether that's linked to in-house production, research, development and design centres, or intensive programmes for young talent."

EBSCON 2022, which is aimed at decision-makers in the industry, will now shed light on planned and expected developments with international experts in four thematic areas. The Electronic Based Systems Conference EBSCON 2022 will take place on 5 October 2022 at Congress Graz, Schmiedgasse 2. The programme starts at 9.30 a.m., registration from 8.30 a.m.

Thematic fields at a glance

- **Sovereignty for the European EBS and Semiconductor Industry:** On the independence and sovereignty of the entire European electronics and semiconductor ecosystem.

- **Opportunities for Start-Ups and SMEs in the EBS Ecosystem:** How start-ups and SMEs benefit from research and investment programmes.

- **Security of Things – enabled by dependable EBS:** Towards security also in the "Internet of Things".

- **Electronic Based Sustainability and Energy Efficiency:** How the electronics and semiconductor industry is reducing its environmental footprint and the solutions to help others do so.

Network support

It is particularly important to the Silicon Alps Cluster that EBSCON 2022 not only provides impulses in terms of content, but that the international industry representatives can also network with the participating decision-makers from the audience. Robert Gfrerer: "The B2B speed dating with our B2Match platform can be used by the registered participants to book the desired discussion partners at EBSCON in advance. The topic of "talents and start-ups" will be given a special stage as well as "our relevant top research centres such as the SAL Silicon Austria Labs", Robert Gfrerer gives an outlook on this year's EBSCON congress.
